VORTEX DUST EXTRACTORS

DUST IS NOT DUST

Deadly dust spreads around construction job sites. Especially true in jobs that involve the use of concrete grinders, electric saws, drills and jack hammers.

The floor grinding and polishing contractor is at high risk of exposure to silica dust. The smallest particles you can't see are the most dangerous. They penetrate into your lungs and stay there, causing horrible disease to the operator.

The best way to reduce silica dust exposure in concrete grinding is to use tested and certified HEPA Filters.

FEATURES

- Drop down continuous bag style
- Maximise grinder performance
- Less dust contamination
- Fast and high volume of dust recovery
- Easy and efficient filter cleaning
- Work with all grinders, scarifiers ect.

WHY BUY A VORTEX SERIES 2 DUST EXTRACTOR?

TESTED & CERTIFIED CLASS H HEPA FILTERS

DROP DOWN CONTINUOUS BAGS

UNIQUE CLEANING WITHOUT OPENING VACUUM
